NEXT STEPS

DEMO WORKFLOW

The story investors should experience in under five minutes.

Joita works best when the narrative is simple and tangible. Click through the six-part flow below to show exactly how trust is created, not just claimed.

TRUST MOAT

What makes Joita defensible and believable.

Each card below should land as a real product advantage, not a buzzword.

Together, they create a stronger narrative than any single dashboard screenshot.

INDIA-FIRST EXECUTION

The local strategy is part of the product, not a footnote.

Joita should present India-specific readiness as thoughtful architecture: payout rails, data boundaries, and future government-system adapters that do not overcomplicate the MVP.

INVESTOR ASSET PACK

Everything you need to show the story right now.

These are the core assets already in this repo, now organized around a cleaner investor narrative. Use the interactive prototype for clicks, the PDFs for leave-behinds, and the Loom script for the live pitch.

Joita

Offline-first proof and payout infrastructure for fragmented Indian farms.
