

The Link to Your Interactive Prototype

Investor handoff sheet for the current Figma design file, click-through prototype, and the final demo sequence to wire before recording Loom.

Editable Figma Design File

PROTOTYPE WIRING

Make The Prototype Feel Real

- Open the design file and switch to the **Prototype** tab in Figma.
- Connect screen actions with **On Click -> Navigate To** between onboarding, perimeter walk, biochar log, sapling proof, and dashboard drill-down.
- Use the prototype link above during the investor demo so the flow is clickable instead of static.

INVESTOR DEMO PATH

Recommended Click Sequence

1. Agent starts field visit and maps the farm perimeter offline.
2. Agent logs a biochar delivery against the approved polygon.
3. Agent captures a live geotagged sapling photo inside the geofence.
4. Investor opens the dashboard heatmap and drills into the same polygon to see the audit trail.

MISSING EXTERNAL DELIVERABLE

Loom Video

The folder does not yet contain the required 3 to 5 minute Loom walkthrough. Record it after the Figma interactions are wired, using the prototype link as the screen-share path.

Suggested narrative: offline capture in rural India, geofence + evidence validation, AgriStack/DPDP-safe identity handling, and the tamper-evident event chain that supports sovereign issuance.
